FROM: Project Engineering

SUBJECT: Release memo - f00tils 0.16.7

REF: CHANGELOG.md, scripts/render-brand-assets.py, site Feature tour, v0.16.6 surface

Bottom line: Ship 0.16.7 as a documentation and site patch. Regenerated forced-color PTY screenshots that demonstrate real features (ls, grep, diff, cat, find, multicall tour), added the Feature tour on <https://f00.sh>, and codified screenshot regen as a mandatory release step in the operator SOP. Product binary behavior is unchanged from 0.16.6 locale-correct C/POSIX classify.

1. Purpose

Record what 0.16.7 ships under house prime directive (README, SOP, site, release memo, release assets).

2. Changes

- scripts/render-brand-assets.py: real PTY, truecolor, forced color env; multi-command feature shots
- New screenshots: f00-grep, f00-diff, f00-cat-find; refreshed hero, ls, core-vs-modern, suite
- Site Feature tour section with explanatory captions; Documents links to this memo
- SOP procedure 11A: regenerate screenshots every release; release workflow still attaches SOP + memo PDFs

3. Verification

3.1 cd asm && make && make check

3.2 python3 scripts/render-brand-assets.py - hero shows f00 0.16.7

3.3 README Documents link to docs/memo-release-0.16.7.pdf and sop-f00tils-ops.pdf

3.4 GitHub Release v0.16.7 assets include SOP, memo, file_id.diz, packages

3.5 Pages deploy shows #tour with current screenshots

4. Install

```
curl -fsSL https://f00.sh/install.sh | bash (pin: F00_VERSION=v0.16.7)
```
